## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

This Office Action is in response to applicant's RCE filed on December 4, 2003.

### ***Election/Restrictions***

This application contains claims directed to the following patentably distinct species of the claimed invention: the first species as shown in Figure 6, the second species as shown in Figure 10, and the third species as shown in Figure 11.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim appears to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Mr. Gunther Hanke on January 7 and 8, 2004 a provisional election was made without traverse to prosecute the invention of the species as shown in Figure 10, claims 9, 10, and 13-16. Affirmation of this election must be made by applicant in replying to this Office action. Claims 11 and 21 has been withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

#### ***Examiner's Amendment***

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Gunther Hanke on January 6, 2004.

The application has been amended as follows:

In claim 13 line 1, "Claim 12" has been changed to --Claim 10--.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 10 and 13-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Namely, claim 10, as amended, recites the limitation "a selectively cross-linked structure", which was not described in the specification.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zamore (U.S. Patent No. 6,596,818). Zamore discloses a radiation-crosslinkable thermoplastic polymer together with a radiation-sensitizing monomer, are suitable for fabricating angioplasty catheter. Zamore teaches that the balloon of such composition exhibit excellent chemical and physical properties. Zamore further teaches an illustrative copolymers useful in the invention include copolyamide polymers include copoly(ether-ester-amide) polymers trademarked under the PEBAX

mark and an illustrative monomer includes triallylisocyanurate ("TAIC") for crosslinking copolymer (column 7 lines 15-51, column 9 lines 13-26). With regards to the balloon exhibiting substantially less expansion above the pressure, as recited, this recitation merely describing the application of the device during operation. The Zamore reference discloses the same polymer crosslinked with a monomer in the same manner, would inherently behave the same, as recited.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
